

TEST PLAN – DemoQA Website

Document ID: TP-DQA-001

Project Name: DemoQA Automation Validation Platform

Reference Docs: SRS (

DemoQA-SRS

), Test Strategy (

Test Strategy Sample

), Test Cases & RTM

1. Test Objectives

The primary objectives of the test effort are:

- Validate end-to-end functionality of all DemoQA modules defined in the SRS (DemoQA-SRS).
 - Ensure interactive elements behave consistently across supported browsers.
 - Verify UI responsiveness, alert handling, modal behavior, frames, widgets, and interactions.
 - Validate Book Store application features including search, login/logout, and user collection.
 - Ensure regression stability during iterative builds.
 - Identify defects and ensure they are logged, tracked, re-tested, and closed.
-

2. Scope of Testing

In-Scope Functional Areas (as per SRS)

Elements Module (Text Box, Check Box, Radio Button, Web Tables, Buttons, Links, Upload/Download, Dynamic Properties)

— Validate text inputs, selections, broken links, file interactions.

Forms Module

— Validate full form input and submission flow (Practice Form).

Alerts, Frames & Windows Module

— Timed alerts, prompt alerts, nested frames, modal dialogs.

Widgets Module

— Accordion, AutoComplete, Date Picker, Tabs, Menus, ToolTips, Progress Bar.

Interactions Module

— Drag & Drop, Selectable, Resizable.

Book Store Application Module

— Search book, login, logout, add/remove books in user profile.

These modules reference functionality explicitly described in SRS Sections 3.1–3.6 (

DemoQA-SRS

).

Out-of-Scope

- Performance benchmarking beyond normal UI responsiveness.
- Mobile device testing beyond basic Chrome device emulation.
- Backend or API load testing.
- Security penetration testing.

3. Testing Approach / Strategy (High-Level)

This Test Plan uses the Test Strategy reference structure (

Test Strategy Sample

), adapted for DemoQA.

Functional Testing

Validate all core UI interactions using manual & automated tests.

Smoke Testing

Check critical flows:

- Page loads
- Alert handling

- Frame switching
- Book Store login/logout

Regression Testing

Automation will cover:

- Forms
- Alerts
- Frames
- AutoComplete
- Drag and Drop
- Search Functionality
- Login/Logout

Cross-Browser Testing

Chrome, Edge, Firefox (based on SRS compatibility requirement §4.3) (

DemoQA-SRS

).

Error & Boundary Testing

- Invalid form inputs
- Broken links
- Max/min field validation

Dynamic Behavior Testing

E.g., Dynamic Properties, Progress Bar (covered in SRS §5.1) (

DemoQA-SRS

).

4. Test Items

- DemoQA Production Website
 - UI components under **Elements, Forms, Alerts, Widgets, Interactions, Book Store**
 - Test Cases designed and mapped in RTM
 - Automated scripts (Selenium/Playwright/Cypress)
-

5. Test Deliverables

- Test Plan
- Test Strategy
- RTM Document
- Manual Test Cases
- Automation Test Scripts
- Daily Execution Report
- Defect Report
- Final Test Summary Report

(Structure referenced from sample Test Plan deliverables (

Test Plan Sample

))

6. Test Environment

Browsers

Chrome, Edge, Firefox (SRS Compatibility requirement §4.3) (

DemoQA-SRS

)

OS

Windows 10/11

Tools

Selenium / Cypress / Playwright

Browser DevTools

Jira (for defect tracking)

Postman (optional, for API validation in Book Store app)

7. Entry & Exit Criteria

Entry Criteria

- SRS is approved (

DemoQA-SRS

)

- Test cases reviewed
- Test environment ready
- RTM completed and approved

Exit Criteria

- 100% test cases executed
- All P1/P2 defects closed
- Test Summary Report delivered
- Stakeholder approval received

8. Roles & Responsibilities

Role	Responsibilities
QA Lead	Planning, execution monitoring, reporting
Test Engineer	Test design, execution, defect logging
Automation Engineer	Script creation & maintenance
Developer	Fix defects
Product Owner	Clarifications, approvals

9. Test Schedule

Activity	Start	End
Test Planning	Day 1	Day 2
Test Case Writing	Day 3	Day 7
Automation Script Prep	Day 3	Day 14
Test Execution Cycle 1	Day 8	Day 12
Defect Fix + Retest	Day 13	Day 16
Regression Cycle	Day 17	Day 20
Test Closure	Day 21	Day 22

10. Risks & Mitigation

Risk	Mitigation
Dynamic elements breaking automation	Use robust locators, retry logic
UI layout changes	Maintain locator repository
Environment unavailability	Use fallback browser/URL
High number of UI defects	Early smoke & modular testing
